Luban Cyclone started at the west of the Arabian Sea, 430km east-southeast from Salalah, 430km east northeast from Socotra and has moved at speed 5 km/h. The wind speed at the centre reached about 100 to 118km/h. It has lost its strength and downgraded from Category 1 to a 'tropical storm' in last hours. The storm made landfall between Mukalla and Al Ghaydah districts of Al Maharah bringing heavy rainfall and causing flooding and power outages in the eastern city of Al Ghaydah.
