CHALLENGES WITH INFORMATION TECHNOLOGY

CHALLENGE #1 – E-WASTE

50M+
TONNES
OF E-WASTE
EVERY YEAR

HOW MUCH E-WASTE DO WE GENERATE EVERY YEAR?

125,000

jumbo jets which is more than all the
commercial aircraft ever created

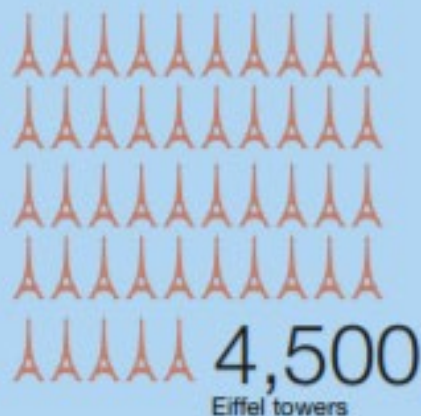

It would take Heathrow Airport
in London up to six months,
day in and day out, to clear that
many aircraft from its runways.

6 months

to clear the runways at Heathrow

This is an equivalent of almost
4,500 Eiffel towers.

4,500

Eiffel towers

Jam them all in one space,
side by side, and they
would cover an area the
size of Manhattan.

the size of
Manhattan

Equivalent to ..

1000

Laptops every second being thrown away

7%

of the Worlds e waste comes from
laptops, PCs and phones

UK generated 2nd largest amount of e-waste as a country in 2022

Environment and Energy, Resource Management, Sustainability

19th January 2023

19,000 Tons in 2008

37,000 tons in 2022

55,000 tons by 2030

Rank	Country	Region	National e-waste legislation/policy or regulation in place	E-waste generated (kt)	E-waste generated per capita (kg)
1	Norway	Europe	Yes	139	26.0
2	United Kingdom	Europe	Yes	1,598	23.9
3	Switzerland	Europe	Yes	201	23.4
4	Denmark	Europe	Yes	130	22.4
5	Australia	Oceania	Yes	554	21.7
6	Netherlands	Europe	Yes	373	21.6
7	Iceland	Europe	Yes	8	21.4
8	France	Europe	Yes	1,362	21.0
8	United States	Americas	Yes	6,918	21.0
10	Belgium	Europe	Yes	234	20.4
10	Japan	Asia	Yes	2,569	20.4

BUT DOESN'T EVERYONE USE...

In 2021, only 17.4% of E Waste was recycled responsibly....

The rest was illegally dumped in low-income countries..

18M

Children are
exposed to
these sites

Children as young as 5 are tasked in “processing” e-waste to mine copper and gold

They are commonly exposed to lead, mercury, nickel, brominated flame retardants, and polycyclic aromatic hydrocarbons

Some GOOD News

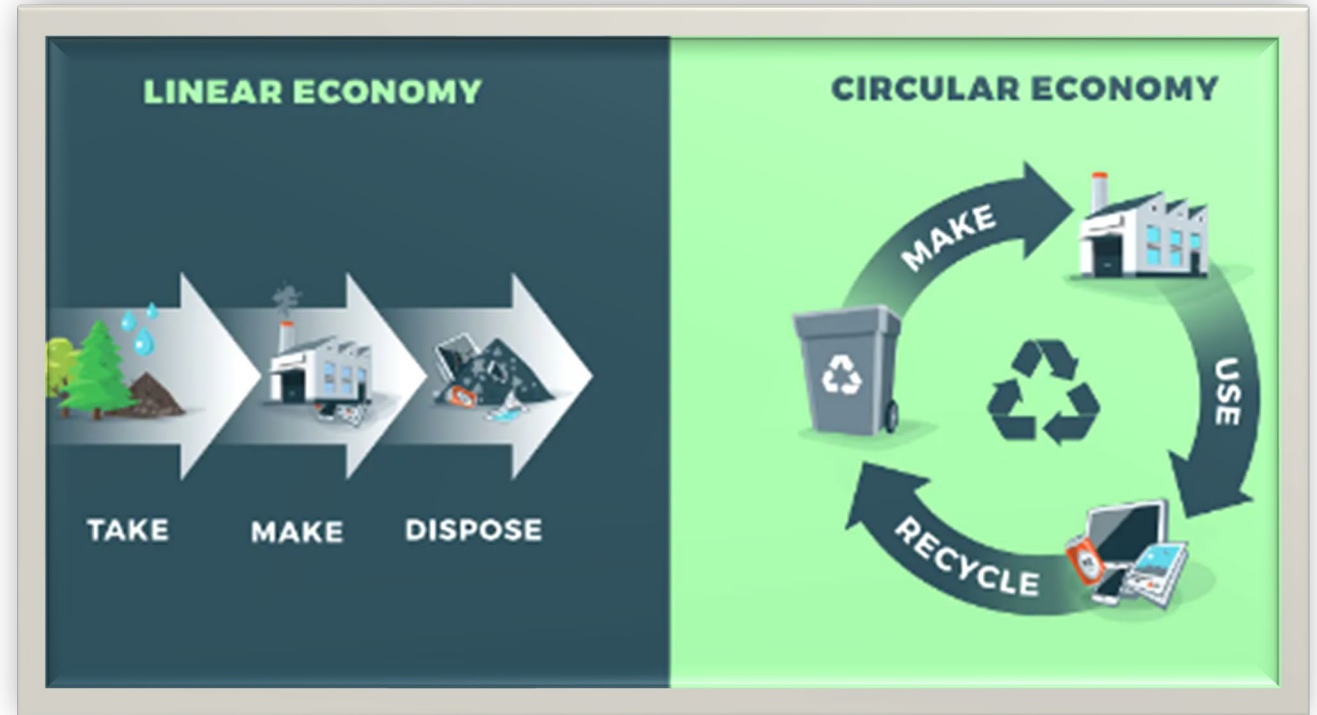

Non-Household Waste electrical and electronic equipment (WEEE) Collected in the UK
Report run on: 28/03/2023

Category Name	January to March 2021 Non-household WEEE (tonnes)
1 Large Household Appliances	116.806
2 Small Household Appliances	4.476
3 IT and Telecomms Equipment	211.049
4 Consumer Equipment	3.722
5 Lighting Equipment	703.086
6 Electrical and Electronic Tools	39.712
7 Toys Leisure and Sports	0.648
8 Medical Devices	66.631
9 Monitoring and Control Instruments	17.818
10 Automatic Dispensers	38.475
11 Display Equipment	3.753
12 Cooling Appliances Containing Refrigerants	725.647
13 Gas Discharge Lamps and LED Light Sources	0.220
14 Photovoltaic Panels	0.000
Total	1,932.043

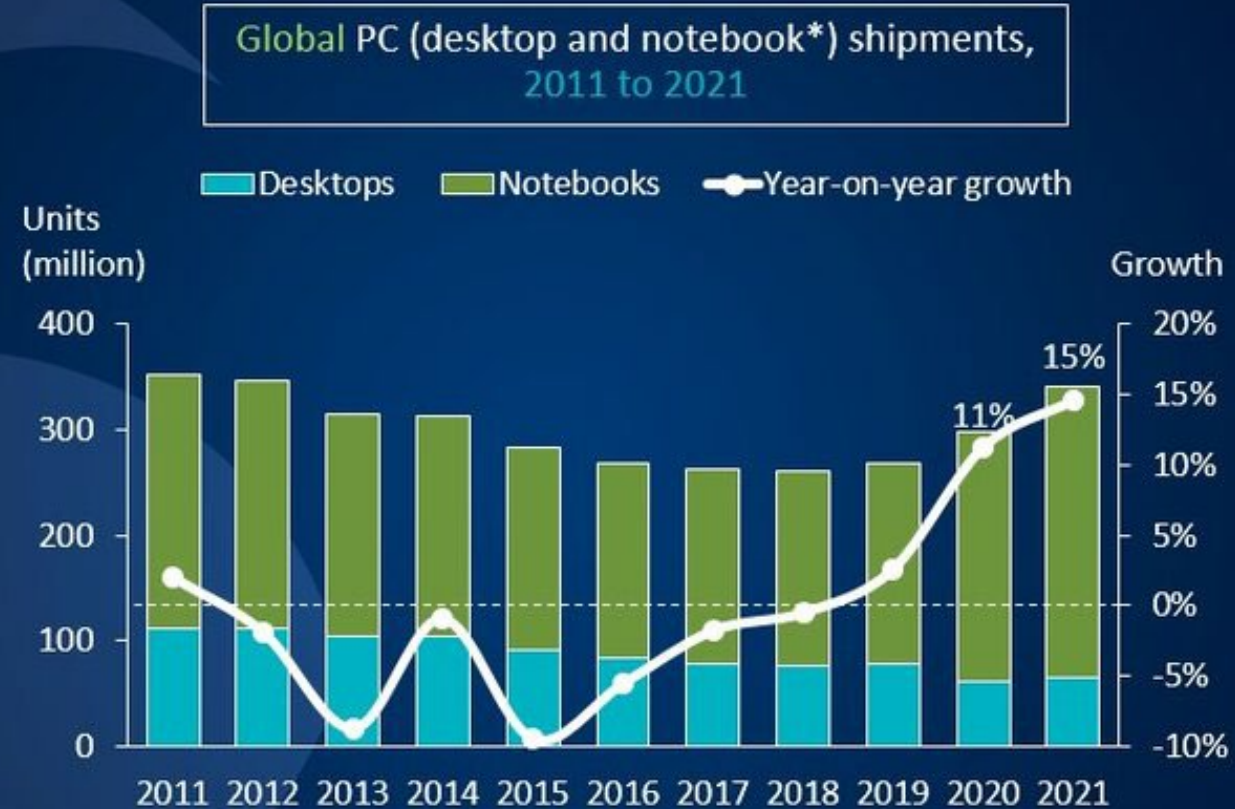

The Waste Electrical and Electronic Equipment Regulations 2013

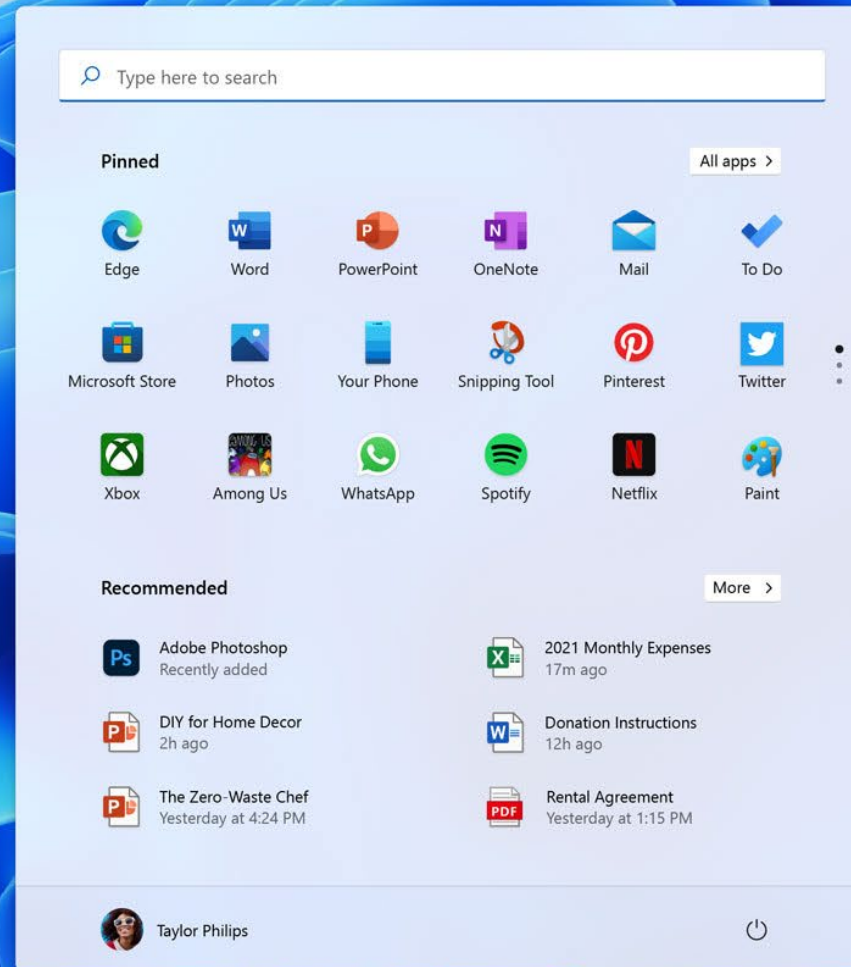

It could get even worse.....

A strong end to 2021 saw global PC shipments **grow 15%** to reach **341 million units**, the highest number since 2012

*Desktops and notebooks include desktop and mobile workstations
Source: Canalys Market Pulse, PC Analysis, January 2022

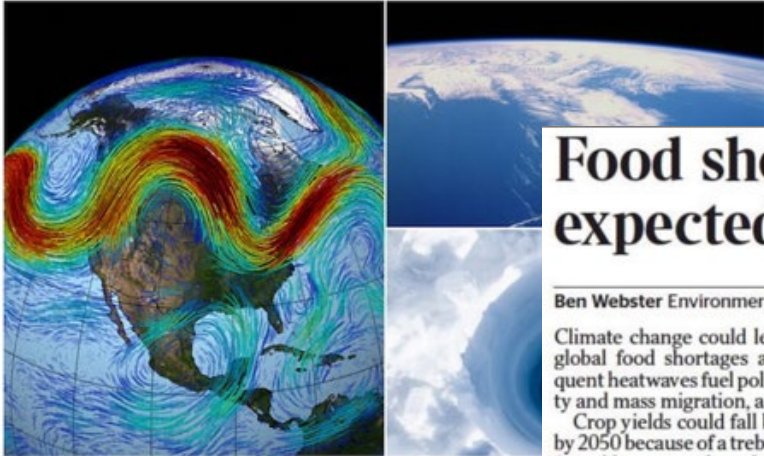

It doesn't end there...

CHALLENGE #2 – Environmental impact

CLIMATE CHANGE

North Atlantic jet stream could migrate NORTH by 2060 due to global warming - leading to dramatic changes in temperature and rainfall in Europe, study warns

Having drilled into Greenland's ice sheet from the University of Arizona extracted past weather conditions going back some 100,000 years.

Food shortages and wars expected as world warms

Ben Webster Environment Editor

Climate change could lead to wars as global food shortages and more frequent heatwaves fuel political instability and mass migration, a report claims. Crop yields could fall by 30 per cent by 2050 because of a trebling in land affected by severe drought unless countries step up efforts to cut emissions, the Chatham House think tank said.

There would be almost a 50 per cent chance of two or more of the top four corn-producing countries — Argentina, Brazil, China and the US — simultaneously losing 10 per cent of their normal crop in the 2040s.

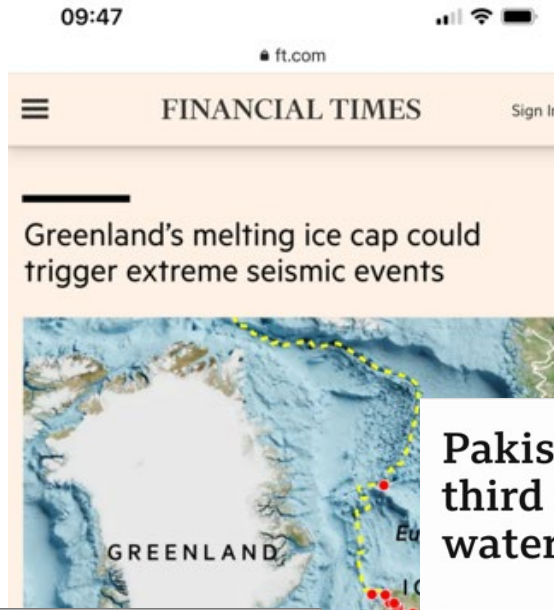

About 700 million people a year could be exposed to droughts lasting at least six months by 2040, double the global historic annual average.

The number of deaths caused by heatwaves could increase to 10 million a year in the 2030s, up from almost 300,000 in 2018 in the 65-plus group.

More than 400 million people could by then live in areas where it is too hot to work outside. The report concludes:

"Cascading climate impacts will probably cause higher mortality rates, drive political instability and greater national insecurity, and fuel regional and international conflict."

Separate research by the climate change think tank E3G revealed that hundreds of planned coal-fired power stations had been cancelled, raising hopes that the government can achieve a key goal for the Cop26 climate conference in Glasgow in November of securing a global deal to phase out coal use. Since 2015, 40 countries have committed to building no coal plants, E3G said. Northern cities are more likely to reap the economic benefits of net zero than southern towns, according to the Social Market Foundation think tank. The northwest, Yorkshire and north-east are among areas with the greatest potential for gains from jobs created by decarbonisation. Knowsley in Merseyside, with one in ten workers in automotive, heating and cooling industries was the local authority deemed best placed to benefit as industries transition to a zero-emission economy.

Pakistan floods: One third of country is under water - minister

By Leo Sands
BBC News

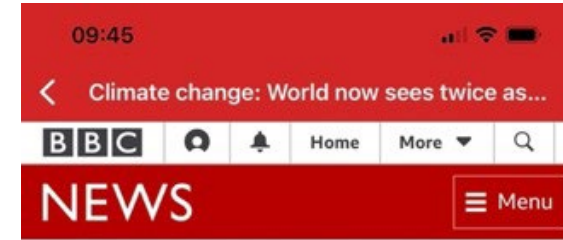

29 August 2022
Updated 30 August 2022

| A flooded street on Monday in Nowshera district

One-third of Pakistan has been completely submerged by historic flooding, its climate minister says.

Devastating flash floods have washed away roads, homes and crops - leaving a trail of deadly havoc across Pakistan.

Climate change: World now sees twice as many days over 50C

By Becky Dale & Nassos Stylianou
Data journalists

1 day ago

The number of extremely hot days every year when the temperature reaches 50C has doubled since the 1980s, a global BBC analysis has found.

They also now happen in more areas of the world than before, presenting unprecedented challenges

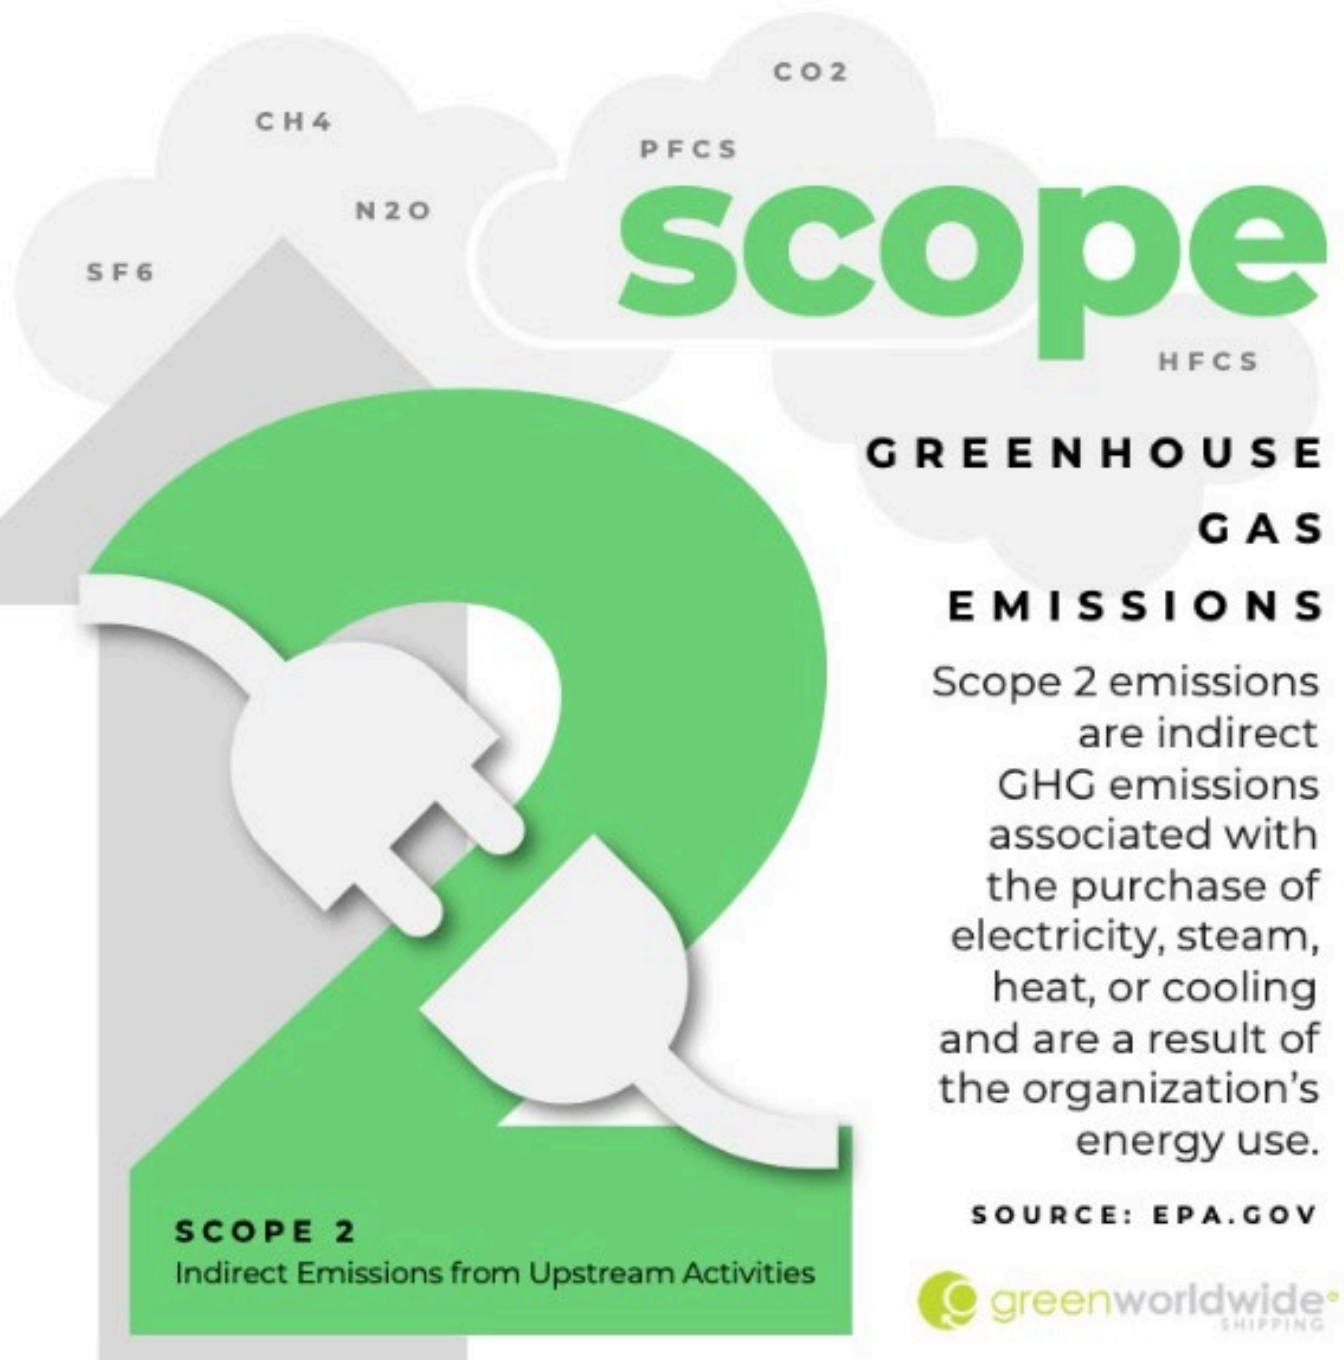

***IT and Commuting creates over
2.7bn tCO₂e greenhouse gas emissions***

***To remove this level of pollution from our
atmosphere requires a forest the size of
Canada and Greenland combined.***

what are the scopes of carbon emissions?

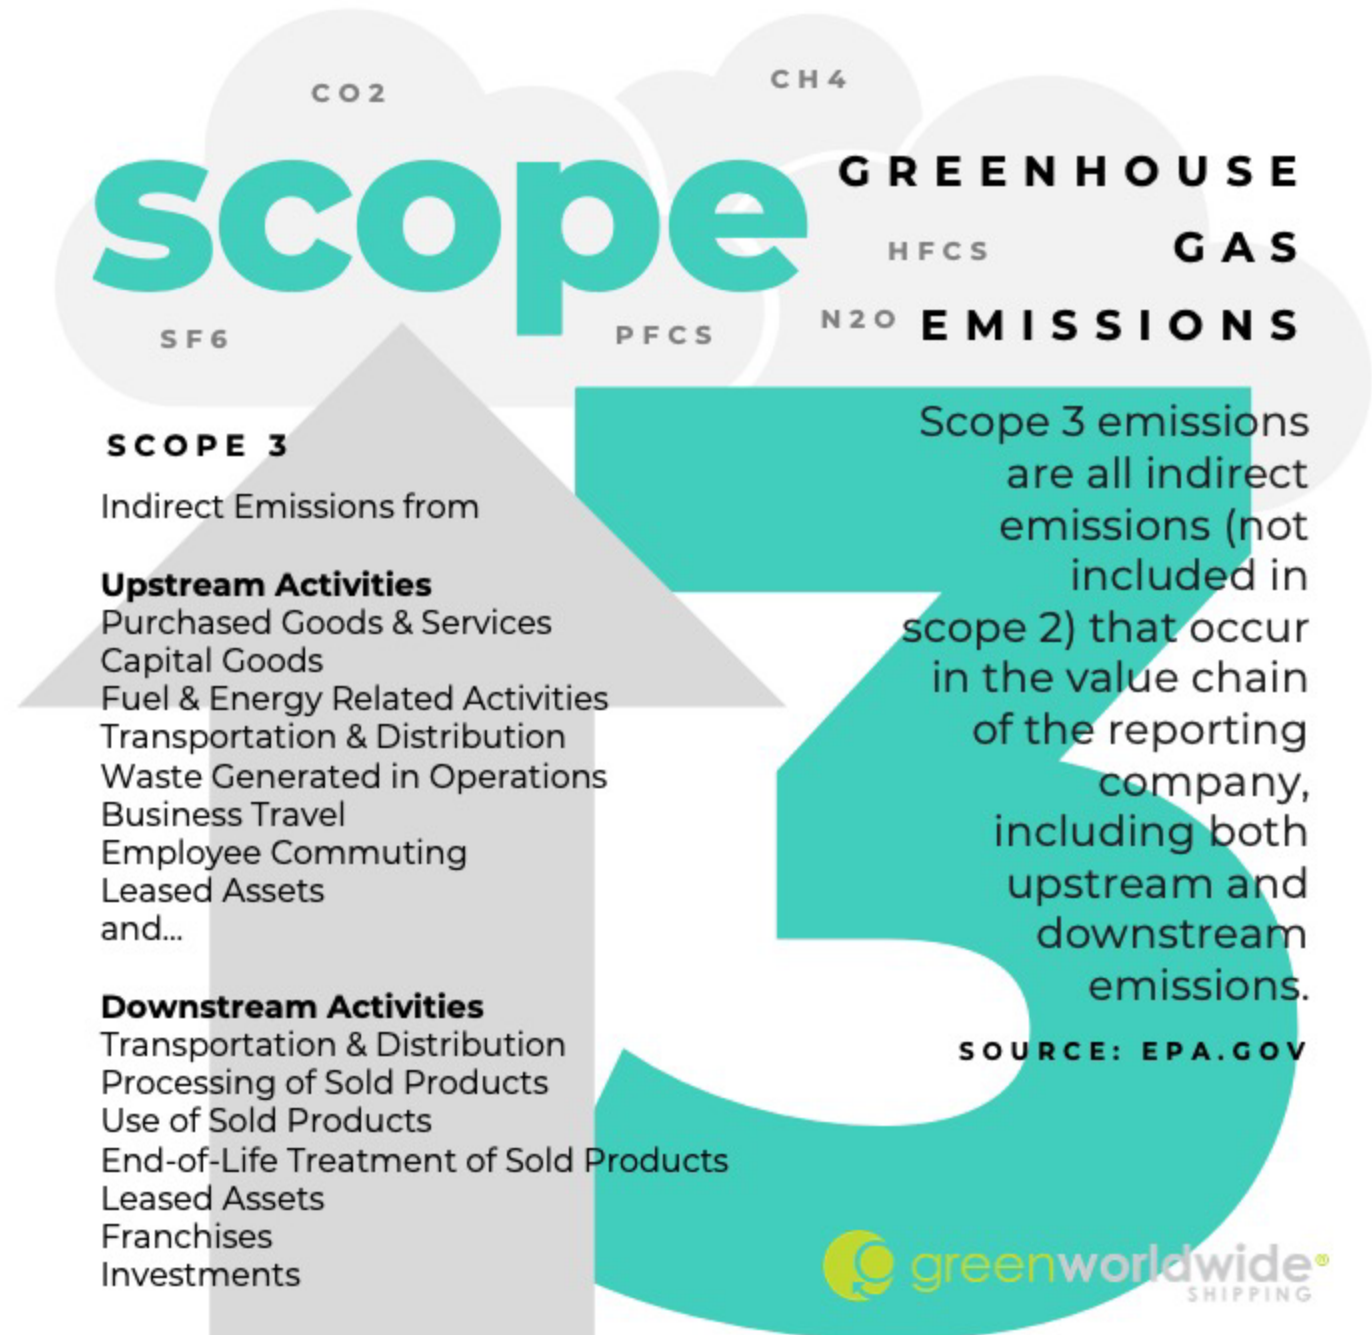

Traditional IT Thinking

- How can I reduce my IT electricity bill?
- Can I use less IT infrastructure?
- Can I move some of my Scope 2 to Scope 3 by moving to the cloud?

New considerations

- How efficient is my cloud provider?
- What is the carbon footprint of my new devices?
- How am I disposing of my old IT equipment?
- Can I implement "connected" solutions and drive down commute?

422 kgs CO₂

61 KgCO₂ comes from usage....
Based on 4 years worth of use.

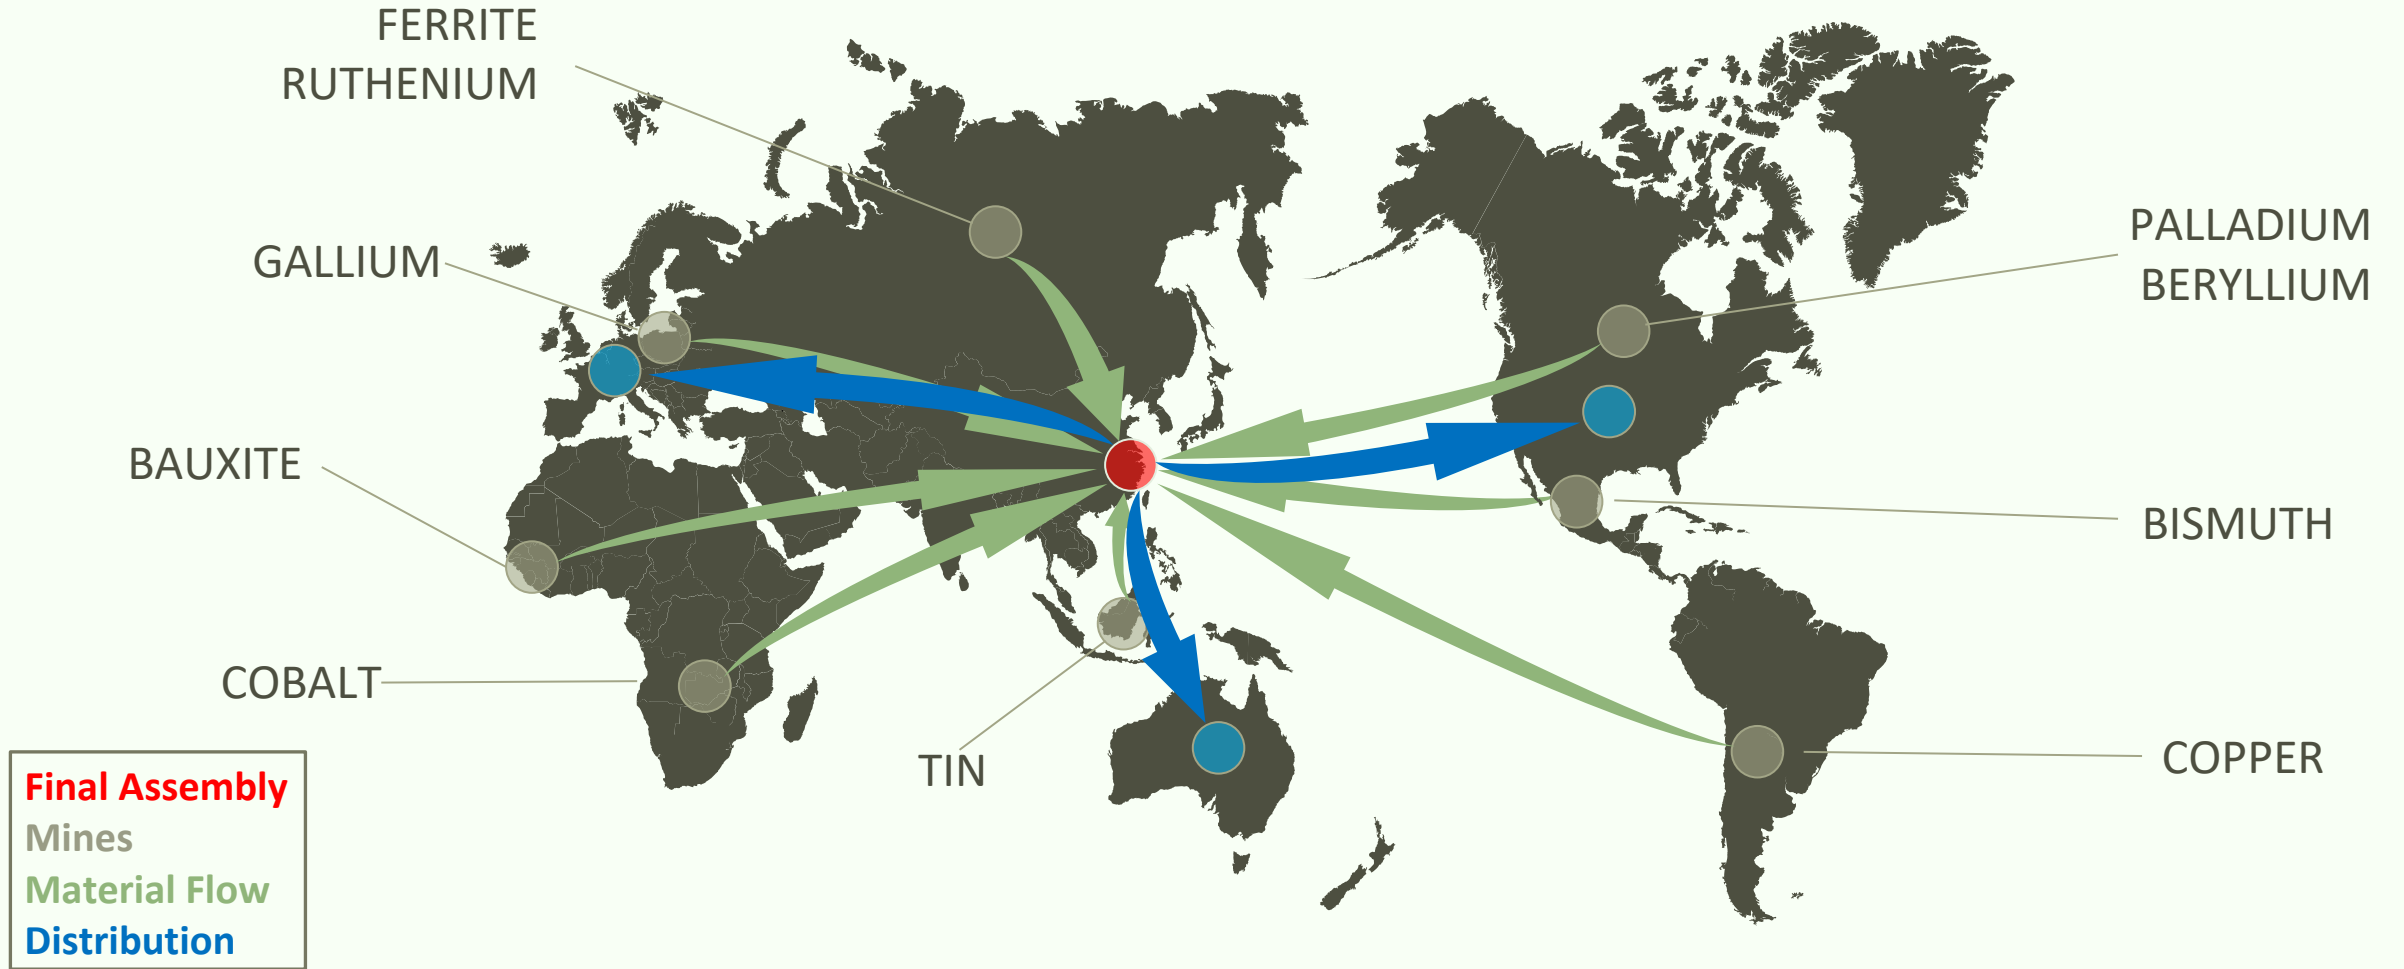

Laptops

Up to 83% of a device's
total carbon footprint is
generated during
manufacturing

VDI and DaaS To The Rescue

SCOPE 2

SCOPE 3

WINDOWS 365 CLOUD PC SUSTAINABILITY STUDY WITH

<https://query.prod.cms.rt.microsoft.com/cms/api/am/binary/RW10vtL>

The results determine that when applied to a 1,000-user group during the period 2023-2030, cloud computing-based approaches reduce scope 2 emissions by 4% as an average when compared to on-premises operations. Uniquely, Windows 365 Cloud PCs enable device useful lifespan extension and procurement displacement. This reduces scope 3 supply chain emissions by 55% for the period and 77% per capita ongoing. From a total carbon footprint perspective, end user computing greenhouse gas emissions are reduced by 46% for the period and 66% per capita ongoing.

SCOPE 2

Power consumption, etc

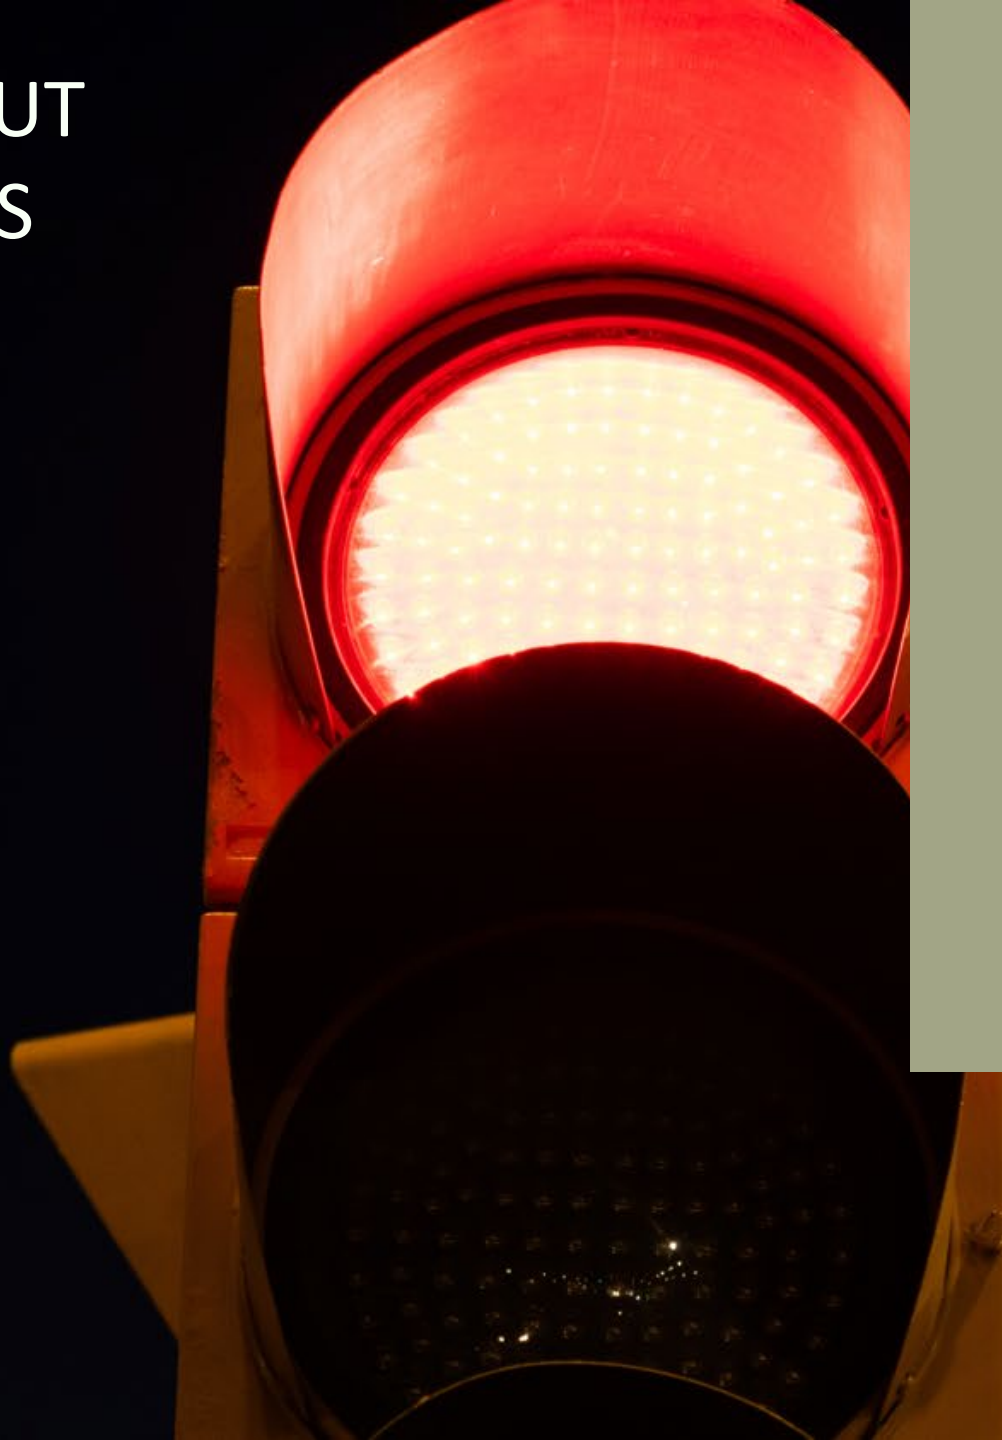

4%

SCOPE 3

Procurement Displacement

55%

AND WHAT ABOUT
THOSE LAPTOPS

EXTEND THE 4
YEAR REFRESH
CYCLE WITH IGEL

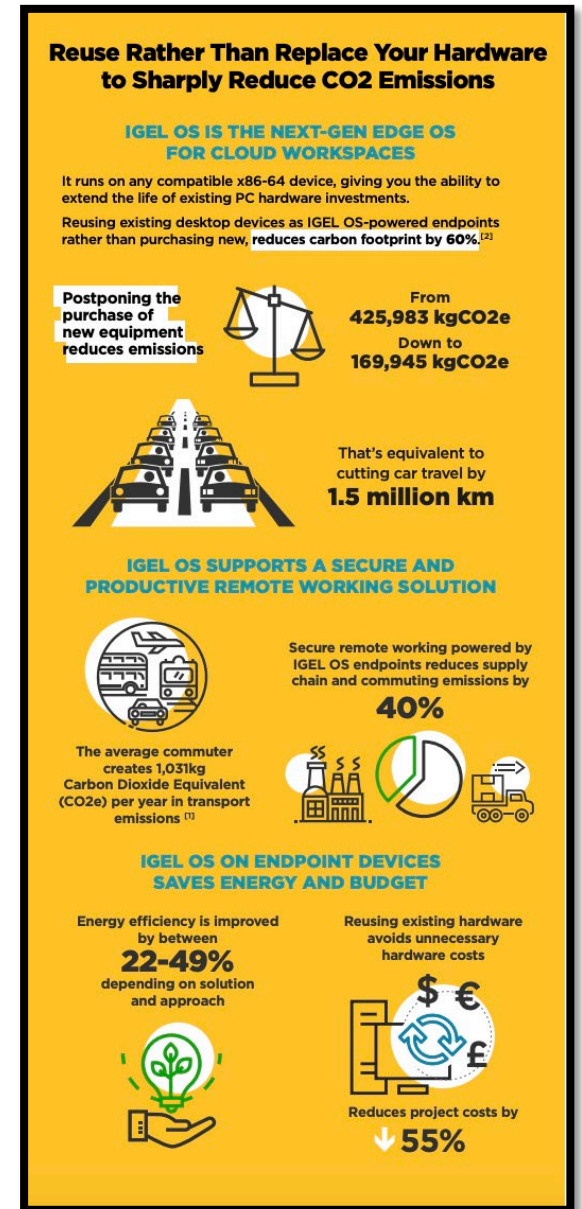

By using your devices for longer, you can reduce project costs by 55%

By repurposing your devices rather than buying new, you can reduce your CO2 footprint by 80%

Using IGEL OS, you can reduce your endpoint power consumption by over 22%

Reducing your device procurement cycles also reduces your e-waste output

FALKIRK COUNCIL

Falkirk Council introduces VDI and IGEL to deliver workplace flexibility and mobility for over 2,000 staff

Falkirk Council

One thing that is particularly pleasing about the project is how the council has used technology to save money whilst giving staff tools to work more efficiently and effectively. We're looking very carefully now at how we can release building assets through the use of Citrix and IGEL."

Falkirk Council has implemented virtual desktop infrastructure (VDI) to provide flexible and mobile working for over 2,000 staff and enable it to assess and rationalize its whole office estate to make better use of its building assets.

The customer

Falkirk Council. Located in central Scotland within half an hour of Glasgow and Edinburgh, Falkirk Council provides a diverse and wide range of services to over 160,000 residents including bin collection, education, home care, planning application services, social housing, fostering and adoption services and roads maintenance. The council serves the largest towns in the area such as Falkirk, Bo'ness, Denny, Larbert, Stenhousemuir and Grangemouth - Scotland's premier port and home to its only major oil refinery.

The challenge

Falkirk Council has deployed Citrix Workspace as its VDI, mobile device and

Pennine Acute Hospitals NHS Trust invests £5m to upgrade IT infrastructure, refreshing its EUC estate using IGEL

...The use of IGEL OS results in the Trust saving £500k not buying new desktops...

IGEL, provider of the next gen edge OS for cloud workspaces, announces today that Pennine Acute Hospitals NHS Trust has updated its end-user computing (EUC) environment, implementing IGEL OS and UD3 endpoints throughout the organisation.

This is part of a £5 million investment the Trust is making to replace and refresh its entire IT infrastructure including compute, storage, WAN/LAN network and thin client platforms. This significant upgrade project is putting in place modern, class-leading technology to support the Trust, provide high quality clinical care and services for around 820,000 local residents.

Located in the Northeast of Manchester, Pennine Acute Hospitals serves the communities of Bury, Rochdale and Oldham along with surrounding towns and villages. Employing 10,000 staff, it operates four hospitals: Fairfield General Hospital, North Manchester General Hospital, Royal Oldham Hospital and Rochdale Infirmary.

As part of the overall project, the necessity to change the EUC platform was pressing. Pennine Acute Hospital's existing thin client solution was already a decade old, over 2,000 hardware devices were end-of-life and no longer supported; and it had a requirement to expand the use of virtual desktop infrastructure (VDI) and thin clients across the organisation. To complicate matters, the devices couldn't be centrally or easily

Bernicia housing group harmonises desktop management with IGEL

desktops across 20 plus sites converted and managed by IGEL's endpoint management software

Reading, UK, October 18, 2018 - Social housing company Bernicia Group has harmonised the management of its entire desktop estate using IGEL's world-leading endpoint management software for the secure enterprise.

The business, based in the North East of England, inherited a mix of ageing Pi and thin client desktops as the result of a merger. It was looking for a cost effective, secure and flexible technology solution to manage the desktops across four main sites and more than 20 satellite offices.

"Rather than invest in a whole new fleet of hardware, we decided to use IGEL's Universal Desktop Converter software (UDC) to turn all the devices into IGEL desktops," explained Adam Watson, Network and Infrastructure Manager at Bernicia Group. "It was a vastly more cost effective way to get more value from our existing desktops and to bring them under one management system."
