

## Instructions for Sending Your Can

---

### Safety First

- Aluminium edges can be sharp.
  - Always wear protective gloves and safety goggles.
  - Work slowly and carefully to avoid injury.
- 

### Before You Start

- Cutting aluminium can dull scissors or blades. Use strong tools.
  - Ensure cuts are clean and straight, with no torn edges.
  - Only use cans that are not overly crushed or bent.
  - Clean the can before working with it. No sticky residue.
  - Please send only clean cans, no import stickers or ingredient labels.
- 

## How to Prepare Your Can

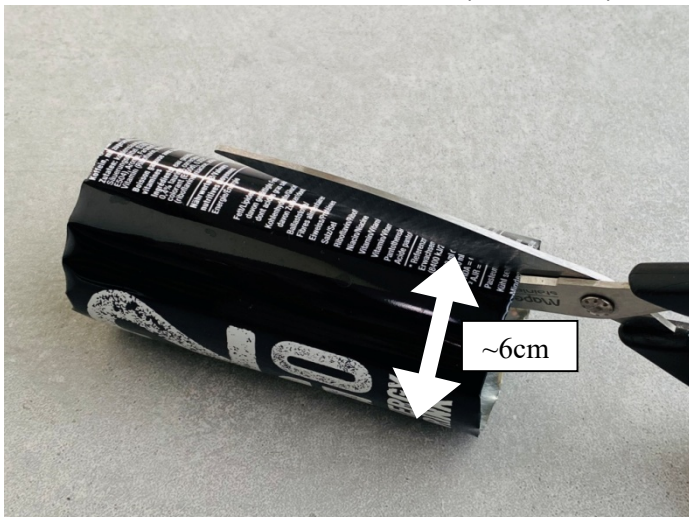

### 1. Cut Off the Top & Bottom

Use a sharp cutter or scalpel to remove the top and bottom of the can.

### 2. Make a Vertical Cut

Cut from bottom to top, about 6 cm (2.3 inches) from the centre of the logo, using scissors for example.

### 3. Flatten the Aluminium Sheet

Gently press the sheet flat — do not fold or crease the edges.

### 4. Clean Both Sides

Wipe down both sides thoroughly. A clean sheet = a better ring!

### 5. Mail It to Us

Please include a note with your order or invoice number.

Place the flattened aluminium sheet and the note in an envelope and send it to:
