

Wedging open fire doors is illegal and dangerous. Dorgard provides a wireless solution for legally holding open fire doors in any position, automatically closing the door when the fire alarm sounds. Dorgard will prevent the spread of fire and smoke.

Dorgard requires no wiring as the unit is battery operated and is fitted to the bottom of the fire door using 4 screws.

#### **Features**

- Improves access in premises in line with the Equality Act 2010
- Complies with BS EN 1155 and accepted by the Fire and Rescue Service
- Automatic night-time release facility
- Available in a variety of colours and finishes
- Suitable for buildings with an automatic fire detection system
- Ideal for offices, care homes, schools and hotels

'The Dorgards did a brilliant job in closing the fire doors. The corridor concerned was compartmentalised as a fire zone so only five residents' rooms were affected. The Fire Inspector commended the activation of the Dorgards and following the Inspector's recommendations, we intend to install units on all our resident's doors, in addition to the corridor fire doors.'
