Compliance Made Easy

Deafgard

The alarm for the deaf
and hard of hearing

In the event of fire, deaf and hard of hearing people will not be able to hear the fire alarm. Deafgard provides a wireless solution for communicating the sound of a fire alarm to deaf and hard of hearing people when they are asleep.

Benefits

Portable device, requiring
no installation

Ensures you comply with
elements of the Equality Act 2010

Independence
for the user

Peace of mind for
family and friends

Alarm
clock facility

Used in hotels
all over the world

Deafgard

Deafgard is a battery powered unit with a pad attachment that goes under the pillow or mattress. If the fire alarm sounds the pad vibrates, lights flash, and the screen displays 'FIRE'.

Deafgard also uses a radio transmitter for loud and busy environments

“ For someone who is deaf or hard of hearing, a stranger coming into your hotel room to alert you of an emergency could be distressing. Thankfully we found Deafgard. Our guests can take the device to their room as it is easily portable, and they can relax knowing they will be alerted automatically in the event of a fire. ”

Ben Hewitt – Hotel Manager

“ Our residents love Deafgard. It gives them independence and peace of mind knowing the device will make them aware if there is a fire, without being disturbed in their room. ”

Adam McDonald – Care Home Owner
