

Fitting instructions

Roof box quick mounts

1 Prepare and position

The kit contains 4 quick mounts, 4 rubber pads and 2 tie-down straps.

Fit a rubber pad to each quick mount to protect the roof box from direct contact with the mounts.

Place the roof box on the roof rack. Insert the quick mounts through the mounting slots in the roof box so that the claws wrap around the roof rack crossbars.

The quick mounts can face either direction.

2 Adjust and tighten

Open the handle and turn the adjustment wheel clockwise to tighten the mount. Then try closing the handle. If the handle closes easily, open it again and turn the adjustment wheel further clockwise. Repeat until considerable force is required to close the handle.

Check that both claws reach equally far under the roof rack crossbar.

3 Check and secure

Close the handle fully. Repeat the adjustment for all four quick mounts and check that the roof box is firmly secured to the roof rack.

The two tie-down straps can be threaded through the loops on the quick mounts to secure the load inside the roof box.
