Build: 2025351

Date: 18/12/2025

Version 13.07 of Netop is now available

These modification notes contain information relating to the minor release of Netop version 13.07.

Bug Fixes

- **macOS Guest – File Transfer Stability Improvements**: Resolved an issue where the session could close unexpectedly when copying or moving multiple folders from Host to Guest on macOS. The file transfer process now handles multi-folder operations reliably and no longer terminates the session prematurely.
- **macOS Guest – Transfer Dialog**: Fixed an issue where the **"Close transfer dialog when finished"** option in the File Transfer window did not consistently control the dialog's behavior. The dialog now closes correctly based on the selected option.
- **Invalid Previous Session Path Handling**: Fixed multiple scenarios where the File Transfer browser pane remained blank if the previously saved directory path was invalid, removed, or no longer accessible. The application now properly falls back to the default directory.
- **Windows 10 (Intel Comet Lake family CPUs) – Blank Screen Issue**: This release includes compatibility adjustments ensuring that Screen Blanking works reliably on Comet Lake hardware without requiring driver removal or fallbacks to Microsoft Basic Display Adapter.

Enhancements

- **Security Manager – Role Assignments**: Improved performance when loading the Role Assignments page in environments with a large number of roles and complex access-right configurations. The record limit setting now applies correctly, significantly reducing loading times and improving usability for large organizations.
- **vPro / AMT Localization**: Added multi-language localization support for the Intel vPro AMT console. This enhancement enables the console interface to be translated and displayed in multiple languages.
- **vPro Console Updated to Version 1.13.0**: Upgraded the Intel vPro console bundled with Netop to **version 1.13.0**, including various upstream improvements and enhanced TLS/HTTPS configuration support.
- **Simple vPro Activation**: Introduced foundational functionality enabling simplified VPro ACM/CCM activation workflows directly from Guest/Host.
- **Rebranding Across Applications**: Implemented updated branding assets across Netop OnPremise applications. This includes refreshed icons, visual elements, and product identity updates aligned with the new design guidelines.

Removed Functionality

- **AMT Console Disabled on Windows 7**: The Intel AMT console is no longer available on Windows 7 x64 systems. Modern AMT console components require browser technologies not supported by Windows 7. To ensure consistent operation and security, the AMT console has been **permanently disabled** on Windows 7 hosts.

This is a minor release and does not require a license key.

If you have questions about your license or wish to upgrade to Netop version 13.07, please contact [Netop Support](#) or your local Netop partner for more information.

Information about the 13.07 release and subsequent maintenance releases can be found on the Releases section of the Netop website.
