

Version: 13.08

Build number: 2026086

## Version 13.08 of Netop is now available

This release focuses on improving stability, security, and overall user experience across key areas of the product.

---

### Key Improvements

- **More Reliable Browser-Based Connections**

Improved the stability of browser-based remote control sessions, ensuring consistent connectivity without requiring service restarts.

- **Enhanced File Transfer Experience (Linux)**

File transfers on Linux systems now complete more smoothly, with improved responsiveness during finalization.

- **Improved UI Consistency**

Addressed inconsistencies in the Host interface to ensure that connection states and session information are always accurately reflected.

- **Better Handling of Unsupported vPro Devices**

Improved behavior when working with devices that do not support Intel vPro, preventing connection issues and ensuring clearer system responses.

### Security Improvements

- **Improved Handling of Sensitive Data**

Strengthened security by ensuring sensitive information is no longer exposed in diagnostic logs during device activation processes.

## General Enhancements

- **AMT Console Improvements**

Added support for compression and signing to streamline workflows and improve reliability.

- **Improved System Feedback and Stability**

Enhanced error handling and messaging across vPro-related operations to provide clearer feedback and prevent unexpected behavior.

- **Documentation Updates**

Updated Help documentation to reflect current product branding.

## Maintenance and Updates

- Updated key third-party components to improve compatibility, stability, and security.
- Performed general codebase maintenance to improve long-term reliability.

This is a minor release and does not require a license key.
