

Release Notes

version: 13.09

build number: 2026166

Version 13.09 of Netop is now available

This release focuses on strengthening security, improving stability, and refining key remote support workflows across Netop components.

Key Improvements

- *Improved Clipboard Transfer Control*
Added an option to skip images during clipboard transfer. The setting is available under Tools > Program Options > Clipboard > "Skip Images from Clipboard Transfer".
- *More Predictable Clipboard Behavior*
Automatic clipboard transfer now works in single-session scenarios only, preventing incorrect behavior when one Guest connects to several Hosts simultaneously.
- *Maintenance Password Management via NowUtil*
Added support for rotating and updating maintenance passwords through the NowUtil command-line interface.

Security Improvements

- *Stronger Cryptographic Options*
Added the Extra High encryption level with support for 4096-bit key lengths for RSA and Diffie-Hellman, helping deployments align with stricter security requirements such as BSI TR-02102-1. This option is not supported for Security Server and Gateway.

General Enhancements

- *Improved AMT Activation Status Visibility*
AMT activation status information is now clearer across Guest, Host, and Portal workflows. The Portal can distinguish whether activation was performed through Portal, direct Guest/Host activation, or an external service.
- *AMT Console 1.22.6 Support*
Added support for AMT Console version 1.22.6.
- *AMT Availability on Windows 7*
Removed the AMT button from Windows 7 builds, as AMT is no longer supported on Windows 7.

Removed Features

- *Remote Printing*
Remote Printing has been removed because it is a legacy feature.

Maintenance and Updates

- Performed general codebase maintenance to improve long-term reliability.

This is a minor release and does not require a license key.

If you have questions about your license or wish to upgrade to Netop version 13.09, please contact **Netop Support** or your local Netop partner for more information.

Additional details about this and future releases can be found in the **Releases** section of the Netop website.
