SUMMARY

Topic:

Treat any type of malocclusion in a mini-invasive way, without any surgery, starting from the sagittal dimension.

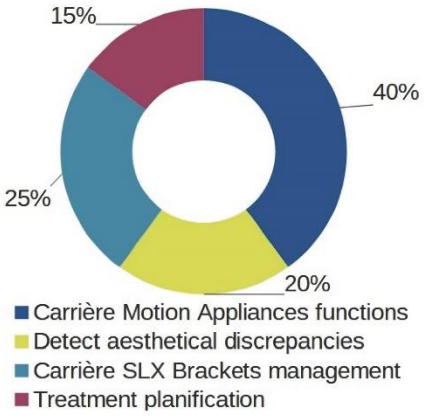

Objectives:

- How to treat every type of malocclusion in a fast, predictable and mini-invasive way
- How to standardize your orthodontic treatment protocol
- How to reach a class I platform starting from minimal, medium and severe class II and class III malocclusion
- How to offer an alternative solution to those who don t want to undergo any surgery
- The Sagittal First philosophy
- The benefits of the Carrière Motion Appliances

About the author:

Luis Carrière DDS, MDS, PhD is the inventor of both the internationally known CarriereSelf-Ligating Bracket and the Carriere MotionTM Appliance. He is a world-renown lecturer on these products, in addition to Orthodontics and Orthognatics topics.
Dr. Carrière also maintains his private practice in the Carrière Orthodontic Centre in Barcelona, Spain.

SKILLS YOU WILL LEARN

The course includes:

- **5** theoretical video lectures
- Several **clinical videos**

Topics covered in the course:

- How to treat every type of **malocclusion** in a **predictable** and **minimally invasive** way
- How to treat every type of malocclusion, even in patients with **mixed dentition**
- How to **standardize** your orthodontic **treatment protocol**
- How to **reach** a **class I platform** starting from class II and class III malocclusions
- **Alternative solutions** for those who don't want to undergo surgery
- The "**Sagittal First**" philosophy
- The **benefits** of the Carrière **Motion® appliances**

At the end of the course, you will be able to:

- Treatment strategies for any malocclusion to achieve results in a maximum of **5 clinical appointments**
- **Rotate the molar** into the distal position
- **Avoid negative impacts** for the patient's facial aesthetics
- Treat, retract and reposition the **anterior teeth**
- Treat in the same way both **open** and **deep bite**
- Improve **TMJ pain** and **clicking**
- Avoid **negative impacts** on the patient's aesthetics
- Squeeze the capacity of **rotation** and **control** to decrease the necessary amount of appointments

Why to enroll:

- You will **standardize** your daily **orthodontic clinical practice** being able to treat every type of malocclusion in an effective and predictable way.
- By attending this course you will receive all the **tricks and tips** to be able to solve every malocclusion case in a maximum of **5 clinical appointments**.
- You will understand the key role of the **Sagittal First philosophy** in the orthodontic practice, an approach that is changing this clinical area.

Who the course is for:

The course is recommended to all **Orthodontics specialists** who are looking for simple solutions to complex cases and want to achieve long-term treatment stability.

Who you will learn from:

Dr. Luis Carrière is the inventor of the internationally known Carrière® Self-Ligating Bracket and the Carrière® Motion™ Appliance, the fastest-growing appliances sold around the world. He is also a world-renown lecturer on Orthodontics and Orthognatics.

Video Lectures:

Video Lecture 1 – The Carrière® Motion Appliances: a solution for different types of malocclusion

In this first video lecture Dr. Carrière will explain that by using his Motion® Appliances you will be able to treat **complex malocclusions** in a very **wide range of patients** with different ages. Participants will understand that the main goal is to **standardize** the treatment protocol and to guarantee **long-term stability** of the reached functional and aesthetic outcome.

In particular, the following topics will be covered in this lecture:

- The golden **proportions** of the human **face**
- How to establish a **good relation** between the different **thirds** of the face
- The importance of **rotating molars** to reach a correct **sagittal condition**
- The **design** of Carrière® Motion Appliances
- The key role of the **elastomers** to let the appliance work properly
- The goal of "**all in 5 clinical appointments**" to treat any type of occlusion

Video Lecture 2 – Carrière Motion® treatment protocol for class II malocclusions

In this video lecture several class II malocclusion **clinical cases** will be shown in order to demonstrate how Carrière Motion® Appliances can be used to treat different problems such as **incorrect occlusions**, huge **overjet**, **retruded mandible** and functional **constricted airways**. The reasons of the **efficiency** of Carrière appliances will be discussed paying specifical attention to the **differences** between them and traditional **braces** or **aligners**.

In particular, the following topics will be covered in this lecture:

- The importance of rotating the **molar** in a **distal position**
- How to avoid **negative impacts** for the patient's aesthetics
- The comparison between **Carrière Motion®** and **braces** or **aligners**
- How the Motion® appliance **distributes** the **stress** and **holds** the structure's **weight**

- How to **retract** the **anterior teeth** after having reached class I platform

Video Lecture 3 – How to treat complex cases with a standardized protocol

Patients often **don't want to undergo surgery** so Carrière Motion® Appliances has become a true effective alternative for many of them. Dr. Carrière will explain you that with his Motion appliances you will be able to treat **complex cases** by converting them in simple **class I occlusion** ones in about 4 to 6 months.

In particular, the following topics will be covered in this lecture:
- How to treat cases with severe **retruded mandible**
- How to **enhance** the relation between the **mandible** and the **maxilla**
- How to manage class II and combined **teeth transposition**
- How to change the posterior occlusal functional plane intruding molars to reach a correct **sagittal condition**
- Why isn't possible to **treat every case** by using only **aligners**?

Video Lecture 4 – Carrière Motion® treatment protocol for class III malocclusions

Carrière Motion® Appliances are the alternative for those **class III malocclusion** affected patients that want to **boost** their **facial beauty** and **harmony** without ongoing any surgery treatment. Multiple clinical cases with **severe malocclusion**, **sagittal discrepancy** and **prominent mandible** will be presented and discussed in a step-by-step way.

In particular, the following topics will be covered in this lecture:
- How to align the **irregularity** of the **maxilla** with the Carrière **SLX Brackets®**
- Treat in the same way both **open** and **deep bites** with the Sagittal First philosophy
- How to **volumize** the **maxilla** and the **upper lip** to accomplish a nicer incisors' position
- The use of the **Grin® scope** to **remotely control** the evolution of a case

Video Lecture 5 – Severe class III malocclusion cases with TMJ pain and clicking

In this last video lecture Dr. Carrière will present different cases in which he will show that with the Motion® appliance you will be able to treat patient with severe class III malocclusion in an average of **5 appointments** not only reaching a **perfect occlusion** and in many of them also something not available by using only braces or aligners.

In particular, the following topics will be covered in this lecture:
- How to **distract** the **condyle** from the deepest part of the craneal **fossa**
- How to solve **TMJ pain** and **clicking**

- The capacity of **rotation** and **control** of the Carrière **SLX Brackets®**
- The cases in which is advised to use **Short Motion® Appliances**
