

「TILTED IMPLANTS」

Enrico Agliardi

Tilted Implants

Dr. Enrico Agliardi

About the Course:

Welcome to **Tilted Implants**, the complete video course dedicated to the rehabilitation protocol: All-on-4®.

Complex rehabilitations specialist **Dr. Enrico Agliardi** and his team guide participants at all level of experience through a multi-specialist training path, aimed at illustrating the uses of the **"All-on-4®" surgical and prosthetic protocols** for the management of edentulous jaws with reduced treatment times, minimum invasiveness for the patient and significant reduction of costs, as a result of the optimal exploitation of the residual bone to avoid (or at least strongly limit) the need to perform bone augmentation.

The theoretical part provides a complete overview of the All-on-4® protocols, with modules specifically dedicated to **surgical and prosthetic protocols, phonation, management of complications and the contribution of guided surgery in the application of tilted implants.**

This section is supported by a series of video surgeries about: **the implementation of implant-prosthetic protocols, with valuable practical advice for the optimal management of simple and complex cases.**

Occlusion in Implant Dentistry didactic objectives:

- Learn immediate load implant-prosthetic rehabilitation protocols;
- Understand the rationale and philosophy that grant success in tilted implant rehabilitations;
- Apply the All-on-4® protocol;

- Learn about the characteristics and methods of making provisional and definitive prosthetic restorations;
- Obtain practical tips and tricks in the daily application, with a focus on pre-implant preparation, the potential of digital approaches and phonation in odontoprostheses.

The video course is designed to make sure everything which is taught can be implemented. It consists of lectures and practical videos. **This program will help in understanding principles used for All-on-4® protocols.**

By enrolling in this training course, you'll get the opportunity to understand, deepen and master different aspects:

- The correct implementation of the principles behind the All-on-4® treatment concepts;
- How to evaluate, diagnose and plan treatment in fully edentulous patients and post-extraction cases;
- The steps involved in the All-on-4® surgical protocol in the upper and lower jaw;
- Innovative restorative approaches for the atrophic maxilla: tilted All on 6 and zygomatic implants;
- The comparison between analog and digital workflow in immediate loading All-on-4® restorations;
- Prosthetic restoration approaches, comprising the immediate provisional restoration and the final full arch restoration, with a specific module on phonetics in prosthodontics.

SUBSCRIPTION TERM: UNLIMITED

Purchase now and get your unlimited access to all the video collection:

The videos will be available 24/7 on all your devices.

Numero di Lectures: 12

Duration: 7h

Video Quality: FULL HD VIDEO

Language: English

Video Lecture 1: Restoring of the vertical dimension - Part 1- Diagnosis

In this first part, Dr. Alessandra Carrera discusses the theory and semeiotics of the cranial jaw relationship and discusses the diagnosis steps related to vertical dimension loss.

Video Lecture 2: The restoration of the vertical dimension - Part 2: complications and considerations in the diagnostic phase

In this second part, Dr. Alessandra Carrera addresses the clinical difficulties that can be encountered in the determination of the occlusal relation, VDO and CR.

Video Lecture 3: Rehabilitations with tilted implants

This video lecture performed by Dr. Enrico Agliardi is part of the continuing education course of Implant Prosthetics with inclined implants All-on-4®, V-II-V, Trans-Sinus and Zygoma; In this lesson Dr. Agliardi will deepen the concepts behind the placement of Tilted Implants.

Video Lecture 4: All-on-4® Principles and Concepts

In this fourth video lecture, Dr. Agliardi will extensively present the fundamental principles and concepts behind "All-on-4®" implant prosthetic rehabilitation.

Video Lecture 5: The All-on-4® step-by-step surgical protocol in the mandible

This video lesson will focus on the extensive step-by-step description of the "All-on-4®" protocol in the mandibular area.

Video Lecture 6: Mandibular surgical approach with All-on-4® technique

This ReLIVE Surgery sees the involvement of a course participant, followed in the first part by the tutor and directly by Enrico Agliardi for the execution of the All-on-4® technique.

Video Lecture 7: Computer-guided surgery in the rehabilitation of atrophic maxillae with tilted implants

In this video lecture Dr. Stefano Panigatti will describe all the steps of the computer guided contemporary protocols in implant prosthetics with All-on-4®, V-II-V, Trans-Sinus and Zygoma tilted implants.

Video Lecture 8: Phonetics in Odonto Prosthetics

This video lecture aims to introduce and explain principles of Phonetics in Odonto prosthetics by giving advices and tips that can be applied in the daily practice and during the treatments planning.

Video Lecture 9: Provisionalization in All on 4® implant rehabilitation

This video by Dr. Riccardo Benzi is part of the continuing education course on implant prosthetics with All-on-4®, V-II-V, Trans-Sinus and Zygoma tilted implants. The lecture will address all the steps needed to achieve a perfect prosthetic result.

Video Lecture 10: Prosthetic Finalization

In this video, Dr. Riccardo Benzi explains, through a series of clinical cases, all the necessary steps to finalize the prosthesis in cases where All-on-4®, V-II-V, Trans-Sinus e Zygoma tilted implants are applied.

Video Lecture 11: Rehabilitation of complex cases with the help of tilted, intraoral and zygomatic implants

This lecture focuses on graftless and immediate load treatments of atrophic maxillae, illustrating the scientific and anatomical background behind All-on-4® and zygomatic anchored implant-prosthetic protocols.

The didactic objective is to provide a full description of the topic that allows the analysis of the clinical application of these approaches and the safety they provide.

Video Lecture 12: All-on-4® technique in upper arch rehabilitation in alveolar extraction site

This surgical video lecture will cover a rehabilitative maxillary surgery using the All-on-4® technique. The operator's description focuses on bone crest preparation, illustrating the importance of osteotomy preparation of implant sites.

Video Lecture 13: All-on-4® Full-Arch restoration in the upper and lower jaw

Patient with total removable prosthesis both in the upper and lower arch.

In the upper jaw there are 2 intraoral implants with "locator" type abutment inserted, in order to increase the stability of the denture, but that shows signs of peri-implantitis and needs to be removed also for unfavorable prosthetic position to support a fixed rehabilitation on implants.

The patient complains of a strong discomfort for the instability of the mandibular prosthesis in addition to the lack of aesthetics and satisfactory function.

After the analysis of radiographic examinations, sufficient bone quantity was found for an All-on-4® type of restoration both in the upper and lower arch.

The provisional prosthetic restoration is fabricated before surgery and will be immediately delivered to the patient after surgery.

Dr. **Enrico Agliardi**

Graduated in Medicine and Surgery at the University of Milan, Specialist in Maxillofacial Surgery (University of Milan, Director Prof. R. Brusati) and in Orthodontics (University of Milan, Director Prof. A. Salvato).

Since December 2009 responsible for the Department of Special Rehabilitation Surgery, San Raffaele Dental Clinic at San Raffaele University Scientific Institute (Milan - Italy) Department of Dentistry, University Vita-Salute San Raffaele, Director Prof. Enrico Gherlone.

Many years of experience in Oral Surgery, Orthognathic Surgery, Pre-prosthetic and Pre-implant Surgery, Advanced Implantology and speaker in several national and international congresses, author and co-author of several national and international publications.

Own practice at Studio Agliardi, in Bollate (MI).
