

OCCLUSION IN IMPLANT DENTISTRY

Dr. Devang Patel

DEVANG PATEL

Occlusion in Implant Dentistry

By Dr. Devang Patel

BDS MFGDP (MJDF) MSc Cons Dent FHEA MBALM

About the Course:

osteocom is pleased to introduce the new course **Occlusion in Implant Dentistry** developed with **Dr Devang Patel** BDS MFGDP (MJDF) MSc Cons Dent FHEA MBA and lecturer in Restorative Dental Practice at Eastman Dental Institute, University College London.

This program provides participants with fundamental concepts on occlusion in implant dentistry, from single implant-supported crowns to full arch implant supported prostheses. This understanding will help dentists in daily practice and in treating cases with implant restorations in general dental practice.

Occlusion in Implant Dentistry video course also covers **practical demonstration on full occlusal assessment in order to understand the information gathering process.** Following these lectures any general dental practitioner will be able to plan occlusal schemes for various clinical scenarios in their daily implant practice with ease and confidence.

Occlusion in Implant Dentistry didactic objectives:

- Introduce differences between natural teeth and implant
- Explain biomechanical consequences of occlusal overloading on implants
- Give an understanding of the principles of implant occlusion
- Introduce the concept of Implant Protected Occlusion
- Discuss various occlusal schemes for different clinical scenarios

The video course is designed to make sure everything which is taught can be implemented. It consists of lectures and practical videos. **This program will help in understanding principles used for implant occlusion leading to a solid foundation on occlusal aspects in implant dentistry.**

By enrolling in this training course, you'll get the opportunity to understand, deepen and master different aspects:

- Have full understanding of biological implications of occlusal overload on implants
- Be able to perform full occlusal assessment
- Be able to understand differences between natural teeth and implants
- Be able to decide appropriate occlusal schemes for various implant cases, from a single tooth to full arch cases.
- Be able to record occlusion for implant cases

SUBSCRIPTION TERM: UNLIMITED

Purchase now and get your unlimited access to all the video collection:
the videos will be available 24/7 on all your devices.

Numero di Lectures: 7

Duration: 4h 40m

Video Quality: *FULL HD VIDEO*

Language: English

Video Lecture 1: Introduction to occlusal Implant Dentistry

This lecture will guide you through the understanding the biomechanical implications of occlusal overload on Implants and how it can affect patient rehabilitation; Dr. Patel will cover during the lectures the rationale behind the importance of an effective occlusal exam in Implantology.

Video Lecture 2: Natural teeth vs Implants

In this video Dr. Patel will explain the main differences between natural teeth and implants; providing the full basis and understanding of the main biological and occlusal characteristics of natural teeth and implant from an occlusal assessment point of view.

Video Lecture 3: Occlusal assessment

In this video lecture Dr. Patel will go through a full Demonstration of comprehensive occlusal examination and will explain how to achieve a complete occlusal assessment. A step by step clinical demonstration completes the lecture.

Video Lecture 4: Principles of Implant Occlusion

In this video Dr. Devang Patel will explain what are the various factors that affect implant occlusion and deepen the concept of Implant Protected Occlusion.

Video Lecture 5: Occlusal schemes

This theoretical and practical lecture will cover and explain different occlusal schemes that need to be considered in different clinical scenarios. Dr. Patel will guide you through all the different occlusal schemes and when to use them.

Video Lecture 6: Recording occlusion

This lecture focuses on the various methods used to record implant occlusion from single tooth to full arch. Dr. Patel will explain and perform occlusal registration applying it to different cases showing how to reach a satisfactory occlusal assessment.

Video Lecture 7: Case based discussion

This video lecture brings to practice all the fundamentals learned into the course, Dr. Patel will present various occlusal schemes used in practical cases.

BIO

Dr Devang Patel

BDS MFGDP (MJDF) MSc Cons Dent FHEA MBALM

Visiting Lecturer in Restorative Dental Practice (UCL)

Devang graduated in 2004 and has been working as a dental practitioner since then. During his professional career he has developed great interest in aesthetic and restorative dentistry including implant dentistry. He has worked towards achieving the highest standards of dentistry by undertaking different postgraduate courses including a one year full time MSc course at Eastman Dental Institute for which he was awarded distinction and postgraduate prize for excellence in clinical and academic achievement.

In addition to private practice Devang teaches restorative dentistry to postgraduate dentists at University College London, Eastman Dental Institute. He also mentors dentists for implant and complex rehabilitation cases. His main teaching interests are occlusion and its use in full mouth reconstructions including implant supported restorations.
